

SET - B

Que 1 :

Write C program to check given number is automorphic number or not ?

Definition :

An automorphic number is a number whose square ends in the same digits as the number itself.

For example:

5,6,25 are automorphic numbers.

$5*5=25$ // last digit is 5

$6*6=36$ // last digit is 6

$25*25=625$ // last digit is 25

Sample input : 5

Sample output : 5 is automorphic number.

Sample input : 7

Sample output : 7 is not automorphic number.

.....

Que 2 :

Write a C program to given pattern.

1

1 2

1 2 3

1 2 3 4

1 2 3 4 5

1 2 3 4

1 2 3

1 2

1

Que 3 :

Write C program to print given pattern.

```
* * * * *
*       *
*     *
*   *
* *
*   *
*       *
* * * * *
```

.....

Que 4 :

Write a C program to insert an element at a given position in an array.

Sample input :

Enter the number of elements in the array: 5

Enter 5 elements: 10 20 30 40 50

Enter the element to be inserted: 25

Enter the position: 3

Sample output:

Array after insertion: 10 20 25 30 40 50

.....

Que 5 :

Write a C program that finds and prints all pairs of numbers from a given array whose sum is equal to a specified target value.

The program should iterate through the array, compare every pair of numbers, and print each pair that meets the condition.

Example:

Sample input:

Array: {1, 5, 7, -1, 5}

Target Sum: 6

Sample output:

Pair found: (1, 5)

Pair found: (7, -1)

Pair found: (1, 5)
